IN THE UNITED STATES PATENT & TRADEMARK OFFICE

In re Application of:
Manoj Ajbani et al
For: THERMOPLASTIC ELASTOMER
COMPOSITION
Serial No.: 10/786,975
Filed: February 25, 2004

) Docket No. DN2003-213
) Art Unit: 1711
) Examiner:

I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to:
Commissioner for Patents, P.O. Box 1450,
Alexandria, VA 22313-1450, on November 12, 2004.

) 
Mary A. Nicoloff

Commissioner for Patents
P. O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

INFORMATION DISCLOSURE IN COMPLIANCE WITH 37 C.F.R. §1.98

As a means of complying with the duty of disclosure set forth in 37 C.F.R. §1.56, the Applicants are calling the following to the attention of the Patent Office and request that they be considered by the Examiner:

United States Patent 3,758,643
United States Patent 4,104,210
United States Patent 4,130,535
United States Patent 4,183,876
United States Patent 4,202,801
United States Patent 4,203,884
United States Patent 4,311,628
United States Patent 4,271,049
United States Patent 4,340,684
United States Patent 4,250,273
United States Patent 4,343,918
United States Patent 4,594,390
United States Patent 5,021,500
United States Patent 5,051,478
United States Patent 5,248,729
United States Patent 5,523,356
United States Patent 5,621,045

United States Patent 6,051,681
United States Patent 6,207,761
United States Patent 4,803,244
United States Patent 4,927,882
United States Patent 5,672,660
United States Patent 5,936,028
United States Patent 6,069,202
United States Patent 6,084,031
United States Patent 6,150,464
United States Patent 6,147,160
United States Patent 6,169,145
United States Patent 6,437,030
United States Patent 3,686,364
United States Patent 3,865,776
United States Patent 6,090,880
United States Patent 5,064,910
United States Patent 4,553,578
United States Patent 4,444,236
United States Patent 5,362,794
United States Patent 5,677,399
United States Patent 5,786,441
United States Patent 6,008,295
United States Patent 6,252,007
United States Patent 6,228,908
United States Patent 6,251,998

However, the above-listed references may not be prior art under 35 U.S.C. §102 and this document should not be construed as an admission that any of the above-listed references are prior art within the meaning of 35 U.S.C. §102.

United States Patent 3,758,643 may be relevant to the prosecution of the subject patent application because it discloses blends of partially cured monoolefin rubber such as EPDM or EPM with a polyolefin resin (polypropylene) where the rubber phase was cured with a peroxide. The compositions were useful as thermoplastic elastomers.

United States Patent 4,104,210 may be relevant to the prosecution of the subject patent application because it discloses compositions of blends of vulcanized high diene rubbers with crystalline thermoplastic polyolefin resins.

United States Patent 4,130,535 may be relevant to the prosecution of the subject patent application because it discloses blends of polyolefin resins and completely cured monoolefin copolymer rubber such as Ethylene-Propylene-Diene rubber.

United States Patent 4,183,876 may be relevant to the prosecution of the subject patent application because it discloses thermoplastic compositions of crystalline thermoplastic polyolefin resins and cross-linked polyalkenamer rubber.

United States Patent 4,202,801 may be relevant to the prosecution of the subject patent application because it discloses dynamically and partially cured blends of monoolefin copolymer rubbers such as ethylene-propylene copolymer rubbers or ethylene-propylene-diene terpolymer rubbers, polyolefin resin, and conjugated diene rubbers such as cis-1,4 polyisoprene or cis-polybutadiene or polychloroprene.

United States Patent 4,203,884 may be relevant to the prosecution of the subject patent application because it discloses blends of polynorborene, plasticizer, and thermoplastic polyolefin resins.

United States Patent 4,311,628 may be relevant to the prosecution of the subject patent application because it discloses blends of polypropylene and EPDM where EPDM was cured with phenolic resins for better oil resistance.

United States Patent 4,271,049 may be relevant to the prosecution of the subject patent application because it discloses blends of crystalline polypropylene and cured rubbers including styrene-butadiene rubber up to 25 weight % styrene or alpha-methyl styrene and the rubber is cured with phenolic or urethane or sulfur donor curative.

United States Patent 4,340,684 may be relevant to the prosecution of the subject patent application because it is similar to United States Patent 4,250,273 and further teaches partial curing of the rubber and narrows the claims for the melt flow rate of the formed blend.

United States Patent 4,250,273 may be relevant to the prosecution of the subject patent application because it discloses thermoplastic ter-blend compositions comprising of about 10 to 50 parts of a crystalline 1-olefin polymer, about 80 to 15 parts of a random styrene-butadiene rubber copolymer and from about 5 to 55 parts of a highly saturated elastomer.

United States Patent 4,343,918 may be relevant to the prosecution of the subject patent application because it claims processes for making blends primarily disclosed in United States Patent 4,250,273.

United States Patent 4,594,390 may be relevant to the prosecution of the subject patent application because it discloses a process for preparation of thermoplastic elastomers

of polypropylene and EPDM under conditions of high shear required for dynamic vulcanization of the EPDM.

United States Patent 5,021,500 may be relevant to the prosecution of the subject patent application because it discloses TPO compositions prepared with a crystalline thermoplastic resin and a halobutyl rubber.

United States Patent 5,051,478 may be relevant to the prosecution of the subject patent application because it provides a dynamically vulcanized composition comprising of a polyolefin resin, an elastomer, and an ethylene copolymer resin such as a copolymer of ethylene and vinyl acetate or an alkyl acrylate.

United States Patent 5,248,729 may be relevant to the prosecution of the subject patent application because it discloses the process for making thermoplastic composition by heat treating a mixture of a thermoplastic resin with no olefinic unsaturated carbon-carbon bond, an elastomer from the group of SBS, SIS, 1,2-polybutadiene rubber, and EPDM rubber, with a crosslinking agent of dihydroaromatic compound.

United States Patent 5,523,356 may be relevant to the prosecution of the subject patent application because it teaches blends obtained by dynamic vulcanization of polypropylene, polyisobutene, EPDM rubber, and polybutadiene.

United States Patent 5,621,045 may be relevant to the prosecution of the subject patent application because it discloses thermoplastic vulcanizates from semi-crystalline polyolefins and blends of crosslinked rubbers with one rubber being C4 to C7 isomonoolefin based (isobutylene) and rubber being EPDM or rubbers derived from a conjugated diene.

United States Patent 6,051,681 may be relevant to the prosecution of the subject patent application because it discloses a process for preparation of thermoplastic elastomer with a rubber such as ethylene-alpha-olefin diene terpolymer (EPDM) and a thermoplastic resin, phenolic curative, a hydrotalcite and a HALS compound.

United States Patent 6,207,761 may be relevant to the prosecution of the subject patent application because it discloses thermoplastic ionomer blend or alloy composition containing an ionomer, crosslinked rubber and polyolefin resins.

United States Patents 6,090,880, 5,064,910, 4,553,578, 4,444,236, 5,362,794, 5,677,399, 5,786,441, 6,008,295, 6,252,007, 6,228,908 may be relevant to the prosecution of the subject patent application because they disclose some examples of modified or coupled solution elastomers such as tin or silicon-coupled, with several variations that may also be used in blends as disclosed in this invention.

United States Patent 6,251,998, 6,169,145, 6,150,464, 6,147,160, 6,084,031,

5,672,660, 5,936,028, 4,803,244 may be relevant to the prosecution of the subject patent application because they teach the methods and hydrosilation crosslinking systems that are useful and can be used in this invention.

United States Patent 6,069,202 may be relevant to the prosecution of the subject patent application because it teaches a thermoplastic elastomer composition that is prepared by blending a polar thermoplastic and non-elastomeric resin, olefinic rubber, and halogenated rubbery copolymer, wherein the rubbers are dynamically vulcanized.

United States Patent 5,962,573, 6,166,132, 6,166,139 may be relevant to the prosecution of the subject patent application because they disclose compositions and methods for making directly paintable TPO applications.

United States Patent 4,927,882 may be relevant to the prosecution of the subject patent application because it discloses a thermoplastic elastomer produced by dynamic vulcanization of SBR to form a dispersed phase of crosslinked SBR in a co-continuous phase of SEBS and polypropylene. The blends were useful in pharmaceutical, consumer and health industries.

United States Patent 3,686,364 and United States Patent 3,865,776 may be relevant to the prosecution of the subject patent application because they give some examples of block copolymers that may be used in the practice of this invention.

United States Patent 6,437,030 may be relevant to the prosecution of the subject patent application because it teaches the preparation of a thermoplastic elastomer composition prepared with a thermoplastic crystalline resin and a rubber, wherein the dynamic vulcanization of the rubber was carried-out using a phenolic resin in the presence of a catalyst formed by a metal halide and a metal carboxylate.

Form PTO-1449 is enclosed herewith.

Respectfully submitted,

Alvin T. Rockhill
Attorney for Applicant(s)
